Transys Projects design and engineering have been at the heart of numerous successful projects, our reputation for quality is underpinned by the testimonial of our customers.

"I am particularly impressed by the standard of design work which has been produced by Transys in what is a technically challenging area."

"I have to say it makes a refreshing change where a supplier is responsive to a problem not of their making, to such an extent that the end customer does not experience any impact whatsoever."

TRANSYS PROJECTS LTD

A proven partner for rail vehicle enhancements

Systems Integration and Installation of Technical Enhancements

As specialists in the integration of technical equipment, we are proud of our association with leading technology product providers.

Examples include the integration design and installation of Entertainment On Demand and Air Conditioning systems.

GSM-R Cab Mobiles and Cab Radios

Transys Projects are the UK leaders in the design and installation of GSM-R. We have also installed a vast number of Motorola radios on London Underground rolling stock.

CCTV Systems

Through partnerships with leading equipment suppliers, Transys Projects have undertaken installation and integration of surveillance and forward facing CCTV systems.

ERTMS – ETCS

The first fully operational ERTMS system in the UK was designed and integrated by Transys Projects. Further ERTMS projects are now being undertaken.

Design · Engineer · Install · Maintain

Transys Projects was formed over 20 years ago as a builder of new trains initially trading under the name Hunslet Transportation Projects.

Transys Projects designed and built Class 323, designed Malaysia 1 and Glasgow Underground Trailers. Now those skills are being applied to rolling stock refurbishment and enhancement as well as to the design of new trains for international clients.

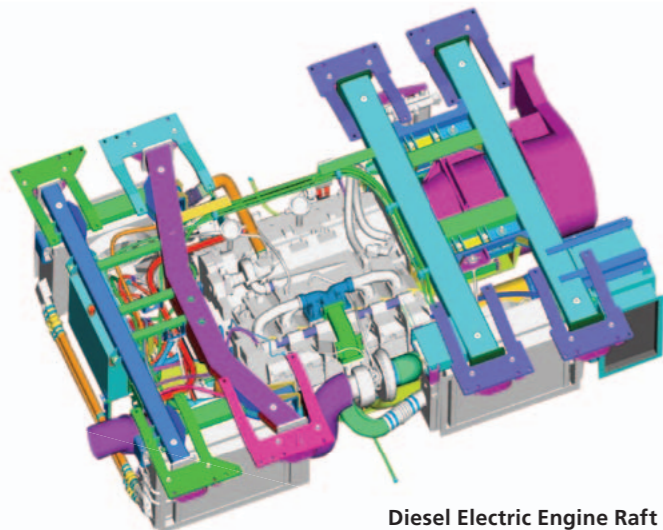

Class 323

Design and Consultancy

Transys Projects provide significant engineering support for OEMs Worldwide.

Dubai Metro Red Line

Diesel Electric Engine Raft

Tender Support

Transys Projects enable larger partners to win major business by providing support to their tenders.

Complete Turnkey Refurbishment

Transys Projects is equipped to undertake refurbishment projects in its own workshops or at off-site locations.

Market Gateway for Higher Technology Products

Transys Projects have worked alongside many global partners to perform integrated design and installation of their products into rolling stock for the UK and worldwide markets.

Transys Designed Products and Site Services

Transys Projects are versatile, designing and developing new products which will integrate into existing and new vehicles.

Auto Sanders

Transys Projects are by far the market leaders for Auto Sanders.

Transys Projects Auto Sanders significantly improve braking performance in low adhesion conditions.

Obstacle Deflectors

Transys Projects Obstacle Deflectors are currently fitted to Pendolino trains.

Site Services

Skilled fitters and technicians are deployed to deliver installation and enhancement at the operator's depot with minimum disruption and maximum efficiency.
