

ENVIRONMENTAL POLICY

The Company is fully committed to the consideration of environmental issues in relation to the products it designs, manufactures and installs, with the primary intention of minimising long term environmental impact.

The Company will take cognisance of environmental issues throughout its design engineering & production / installation process. The process will be conducted in accordance with formal procedures to ensure that any issues that could have an adverse affect on the environment are reviewed and that appropriate measures are taken to mitigate environmental matters to the extent reasonably practicable.

To ensure this, the following issues are considered during the drafting of Design Documents and Installation Instructions, but not to be limited by them in the knowledge of emerging scientific information and environmental legislation:-

Recycling

End Life Disposal

Manufacturing Processes

Emissions

Consumable Usage

Energy Usage

The company will endeavour to promote similar concern for environmental issues throughout its supply base and encourage, as practical, similar philosophies with its suppliers.
